

## Quiz (Carolina Reaper)

---

### Open Ended Questions (FRQ)

- Q9.** A company is shipping 480 units of a product. The company wants to pack the units in boxes that hold 8 units each. How many boxes are needed, and what is the remainder if the company only has boxes that hold 8 units? Show your work and explain your answer.
- Q10.** A traffic engineer wants to determine the average number of cars that pass through an intersection per hour. If 540 cars pass through the intersection in 6 hours, what is the average number of cars per hour? Use the division algorithm to find the quotient and remainder, and explain what the remainder represents in the context of the problem.

### Chef's Tips

- Emphasize the use of the division algorithm to solve problems
- Have students show their work and explain their answers
- Remind students to check their units and make sure they are consistent
