

Homework 3

Q1. What is the variable in the expression $2x + 3$?

- (A) 2
- (B) 3
- (C) x
- (D) $2x$
- (E) None of the above

Q2. Identify the coefficient in the term $4y$?

- (A) y
- (B) 4
- (C) $4y$
- (D) None of the above
- (E) 0

Q3. What is the constant term in the expression $x + 2$?

- (A) x
- (B) 2
- (C) $x + 2$
- (D) None of the above
- (E) 0

Q4. Which of the following is an example of a simple expression?

- $3x$
- (A) Equation
- (B) Inequality
- (C) Expression
- (D) None of the above
- (E) Formula

Q5. What operation is denoted by the symbol $+$?

- (A) Subtraction
- (B) Addition
- (C) Multiplication
- (D) Division
- (E) None of the above

Q6. Identify the operator in $7 - 2$?

- (A) $+$
- (B) $-$
- (C) *imes*
- (D) *div*
- (E) None of the above

Q7. What does the term $3 \cdot x$ represent?

- (A) 3 divided by x
- (B) 3 subtracted from x
- (C) 3 multiplied by x
- (D) 3 added to x
- (E) None of the above

Q8. Which part of the expression $2x + 5$ is the constant term?

- (A) $2x$
- (B) 5
- (C) $2x + 5$
- (D) None of the above
- (E) 2

Open Ended Questions (FRQ)

Q9. Draw a diagram to represent the expression $x + 2$. Label the variable and the constant.

Q10. Explain in your own words what a variable is in an algebraic expression. Provide an example.

Chef's Tips

- Ensure students understand that variables can represent any value, not just numbers.
- Emphasize the difference between coefficients and constants in expressions.
- Use visual aids to help students grasp the concept of expressions and variables.
